From this reason an upper bound is set  $rJ \ll a, B, (w - a)$ . The limitations of the deformation theory to capture real plastic flow processes are . In this way, a trial and error approach can be used to search for the ‘optimum a’ (and thus for the optimum b’) . This approach is essentially the direct application of Eq. (1); therefore, it is extremely accurate provided the mesh density is fine enough to capture the . The plastic flow of materials is often called ‘plastic deformation’ or ‘plastic flow’.. Capturing the deformation of any material with plasticity and applying it to the modeling process is the most promising approach that we can take to accurately describe flow behavior of any material . Using the observed deformation data to find an ‘optimum a’ is not a trivial task due to the inherent non-linearity of plastic flow behavior. Therefore, the trial and error approach is usually used to find the ‘optimum a’, which in turn gives the optimum b’ for the ‘optimum a’ as a function of time.. Examples of such a trial and error approach can be found in the computational work of Maringhini . Mar 2, 2020 In this way, a trial and error approach can be used to search for the ‘optimum a’ (and thus for the optimum b’) .
